

EXERCISE NO.2

Code:

Main Funtion:

Code:

```
public class EntryExercise2 {
    public static void main(String[] args) {
//    Question 1
Parent pObj = new Parent();
Child cObj = new Child();
pObj.print();
cObj.show();
cObj.print();

//    Question 2
Member mObj = new Member();

System.out.println("Enter Member Name:");
mObj.setName(ConsoleInput.getString());

System.out.println("Enter Age:");
mObj.setAge(ConsoleInput.getInt());

System.out.println("Enter Phone Number:");
mObj.setPhoneNumber(ConsoleInput.getString());

System.out.println("Enter Address:");
mObj.setAddress(ConsoleInput.getString());

System.out.println("Enter Salary:");
mObj.setSalary(ConsoleInput.getInt());

System.out.println();

System.out.println("Member Details:");
System.out.println("Name: " + mObj.getName());
System.out.println("Age: " + mObj.getAge());
System.out.println("Phone Number: " + mObj.getPhoneNumber());
System.out.println("Address: " + mObj.getAddress());

        mObj.printSalary();

// Prime Member object
```

```
System.out.println();
System.out.println("Enter Prime Member Details:");
PrimeMembers pm = new PrimeMembers();
```

```
System.out.println("Enter Name:");
pm.setName(ConsoleInput.getString());
```

```
System.out.println("Enter Age:");
pm.setAge(ConsoleInput.getInt());
```

```
System.out.println("Enter Phone Number:");
pm.setPhoneNumber(ConsoleInput.getString());
```

```
System.out.println("Enter Address:");
pm.setAddress(ConsoleInput.getString());
```

```
System.out.println("Enter Salary:");
pm.setSalary(ConsoleInput.getInt());
```

```
System.out.println("Enter Joining Year:");
pm.setJoiningYear(ConsoleInput.getInt());
```

```
System.out.println("Enter Joining Fees:");
pm.setJoiningFees(ConsoleInput.getInt());
```

```
System.out.println("Is Active? true/false:");
pm.setActive(ConsoleInput.getBoolean());
```

```
System.out.println();
System.out.println("Prime Member Details:");
pm.display();
```

//Question 3

```
Rectangle rObj = new Rectangle(10, 5);
rObj.Area();
rObj.Perimeter();
```

```
System.out.println();
```

```
Square sObj = new Square(5);
sObj.Area();
sObj.Perimeter();
```

//Question 4

```
Square1 spObj = new Square1();
spObj.print();
spObj.show();
    }
}
```

Code:

//Question 1 Solution :

```
public class Parent {
    public void print() {
        System.out.println("This is parent Class");
    }
}

class Child extends Parent {
    public void show() {
        System.out.println("This is Child class");
    }
}
```

Code:

//Question 2 Solution :

```
public class Member {
    private String name;
    private int Age;
    private String PhoneNumber;
    private String Address;
    private int Salary;

    // Getters and Setters
    public String getName() {
        return name;
    }

    public void setName(String name) {
        this.name = name;
    }

    public int getAge() {
        return Age;
    }

    public void setAge(int age) {
```

```
        Age = age;
    }

    public String getPhoneNumber() {
        return PhoneNumber;
    }

    public void setPhoneNumber(String phoneNumber) {
        PhoneNumber = phoneNumber;
    }

    public String getAddress() {
        return Address;
    }

    public void setAddress(String address) {
        Address = address;
    }

    public int getSalary() {
        return Salary;
    }

    public void setSalary(int salary) {
        Salary = salary;
    }

    public void printSalary() {
        System.out.println("Salary = "+Salary);
    }
}

class PrimeMembers extends Member{
    int JoiningYear;
    int JoiningFees;
    boolean isActive;

    public int getJoiningYear() {
        return JoiningYear;
    }

    public void setJoiningYear(int joiningYear) {
        JoiningYear = joiningYear;
    }
}
```

```

    public int getJoiningFees() {
        return JoiningFees;
    }

    public void setJoiningFees(int joiningFees) {
        JoiningFees = joiningFees;
    }

    public boolean isActive() {
        return isActive;
    }

    public void setActive(boolean isActive) {
        this.isActive = isActive;
    }

    public void display() {
System.out.println("Name: " + getName());
        System.out.println("Age: " + getAge());
        System.out.println("Phone Number: " + getPhoneNumber());
        System.out.println("Address: " + getAddress());
        System.out.println("Salary: " + getSalary());

        System.out.println("Joining Year: " + JoiningYear);
        System.out.println("Joining Fees: " + JoiningFees);
        System.out.println("Is Active: " + isActive);
    }
}

```

//Question 3 Solution :

Code:

```

public class Rectangle {
    private int Length;
    private int Breadth;

    Rectangle(int length, int breadth){
        Length = length;
        Breadth = breadth;
    }

    public void Area() {
        int area = Length * Breadth;
    }
}

```

```

        System.out.println("Area of Rectangle = "+area);
    }

    public void Perimeter() {
        int Peri = 2 * (Length + Breadth);
        System.out.println("Perimeter of Rectangle = "+Peri);
    }
}

class Square extends Rectangle{
    Square(int side){
        super(side,side);
    }
}

```

Code:

//Question 4 Solution :

```

public class Shape {
    public void print() {
        System.out.println("This is shape");
    }
}

class Rectangle1 extends Shape{
    public void show() {
        System.out.println("This is rectangle shape");
    }
}

class Circle extends Shape{
    public void print2() {
        System.out.println("This is circular shape");
    }
}

class Square1 extends Rectangle1 {
    public void display() {
        System.out.println("Square is rectangle");
    }
}

```
